**An Innovative Lens solution for
Myopia Management**

Children's Eye Health

Children are visual learners, in fact, a major portion of their learning occurs through vision. Needless to say, taking care of their eyesight is extremely important.

Impacts of Myopia

Myopia is a growing health problem in children given the modern lifestyle changes. Children who develop myopia early in life are at an increased risk of developing more serious visual problems later in life. Earlier diagnosis of myopia and its management can greatly reduce its impacts in adulthood.

Lifestyle Recommendations

Taking care of children's eyesight is easier than you think by following healthy lifestyle habits.

Spend more time outdoors everyday, 2 hours or more

Regular eye exams to detect problems such as myopia

Take regular breaks from long, intensive screen time or near work

An Advanced Freeform Lens designed to Correct Myopia & Slow Down its progression

Technology

Based on **Peripheral Defocus** technology, MyoFit design defocuses the peripheral image on the retina. This helps slow down the development of axial related myopia in children's eyes.

Benefits

- A safe, non-invasive solution for myopia management.
- Corrects as well as slows down myopia.
- Unique design for children's lifestyle needs of today.
- An easy, fast-adapting lens.
- UV & BlueLight protection (when ordered)
